Week A-4/7/26- Group Meeting Privacy

Meeting Information

Date: 04/07/2026 | **Time:** 20:27 - 20:51 (America/New_York)

Attendees: Alexander Price, Brittany Fetterman, Chijioke Otuonye

Quick recap

The meeting focused on discussing a homework assignment involving the analysis of digital services and privacy agreements. Brittanyfetterman explained that each student needs to identify 8-10 individual services and select 3-4 of those for a group analysis. The team discussed confusion around the assignment directions, particularly regarding regulatory comparisons and whether the analysis should be done individually or for the group. Alexander raised questions about handling multiple privacy agreements for the same service, and the group noted that the assignment appears to focus more on writing rather than coding. The team agreed to have their selected services identified by Saturday (04/11/2026), though specific implementation details and clarification on the assignment requirements remained unclear.

Next steps

- All group members: Complete list of 8-10 individual services and write about them (no specific deadline stated, but implied before next group work)
- All group members: Select 3-4 services from individual list for group analysis and communicate choices by Saturday (04/11/2026)
- brittanyfetterman: Follow up with instructor via email and/or Thursday (04/10/2026) call to clarify assignment requirements
- Alexander: Upload meeting notes/files to GitHub collaboration space
- (Optional - implied) Other group members: Consider sending additional emails to instructor to get clarification on assignment requirements
- All group members: Revisit progress on Monday night (04/14/2026) to determine what needs to be done

Summary

Unclear Points Requiring Clarification

Missing Context: The following points from the meeting discussion need additional

clarification:

- **Assignment Structure:** The exact relationship between individual work (8-10 services) and group work (3-4 services) remains unclear. It's uncertain whether the 3-4 group services are a subset of the individual 8-10 or separate additions.
- **Step 6 Ambiguity:** The team referenced confusion about "step 6" regarding individual vs. group work, but the document doesn't specify what step 6 entails or what the full assignment steps are.
- **Steps 3 and 5 Redundancy:** Brittany and Alexander noted overlap between steps 3 and 5 concerning "digital service lists and privacy agreements," but the specific nature of this redundancy is not detailed.
- **Grading Criteria:** Uncertainty about whether compiling all identified services into one document affects the grade.
- **Chijioke's Input:** The third attendee (Chijioke Otuonye) is listed but their contributions or questions during the meeting are not documented in the summary.
- **Regulatory Comparison Scope:** The question about whether regulatory comparisons are per-company or group-wide was raised but no definitive answer was recorded.
- **GitHub Collaboration Space:** Alexander is assigned to upload files to GitHub, but no repository link or structure details are mentioned.

Homework Service Identification Discussion

Brittany and Alexander discussed a homework assignment involving finding 8-10 services that they have signed up for. They expressed some confusion about the specific requirements, particularly regarding whether all identified services need to be compiled into one document and whether this is part of the grade. Brittany mentioned sending an email to clarify these details.

Group Project Analysis Requirements

Brittany and Alexander discussed the assignment requirements, clarifying that each person needs to complete 8-10 individual analyses, with 3-4 of those being for a group project. Brittany expressed a desire to start working on the group analysis by Saturday (04/11/2026) and requested that Alexander confirm which of his 3 analyses would contribute to the group project by Thursday (04/10/2026). The discussion also clarified that the same service can be used across different group members' analyses.

Assignment Direction Clarification Discussion

The team discussed confusion around assignment directions, particularly regarding **step 6** which was unclear about whether tasks should be completed individually or as a group. Brittany expressed concern about the lack of clarity in the directions and planned to reach out to the instructor early Thursday (04/10/2026) if no clarification was received. The team agreed to work on individual assignments (8-10 items) by Saturday (04/11/2026), with a requirement to select three items for the group by the same deadline. *Note: The specific content of step 6 was not detailed in the meeting discussion.*

Regulatory and Privacy Policy Comparisons

Alexander raised a question about whether regulatory comparisons need to be conducted for each company or for the group as a whole. Regarding privacy agreements, Alexander noted finding multiple privacy policies for some companies, including separate agreements for different regions. Brittany clarified that as long as one appropriate policy is selected, it shouldn't be a significant concern.

Digital Service Analysis Project Planning

The team discussed a project involving data collection and comparative analysis, with Alexander noting that the work seemed more focused on writing rather than coding. Brittany and Alexander identified redundancy between **steps 3 and 5** of the project, particularly regarding the creation and analysis of digital service lists and privacy agreements. The team agreed that each member should select 3-4 digital services by Saturday (04/11/2026) and share their selections in the message thread, while individual analysis work would remain personal to each team member. *Note: The specific requirements of steps 3 and 5 were not fully elaborated in the discussion.*
